March 25, 2019

Dear SVGMD Directors,

Roberti Ranch has another failed irrigation well that can no longer be used for pumping a large volume of water. This well is approximately three miles north of where the previous re-drilled well site is. A well permit will be obtained to drill a replacement well within 200' of the failed well, per District Ordinance 18-01 Sec. 6 requirements.

Ordinance 18-01 also states that the well being replaced must be "destroyed in accordance with district, state and local requirements" (Sec. 6b). We once again request a variance to not destroy the failed irrigation well. Please consider this variance request for Roberti Ranch to retrofit the failed well and turn it into a small-capacity stock well that would pump around 10 to 15 gallons per minute, when needed for watering cattle.

Our existing practice has been to turn on the irrigation well when stock water was needed in that area of the ranch, but it is not an efficient way to get water to the cattle. By allowing us to turn the old well into a stock well, we will be able to be more efficient and will be able to use much less water to water the cattle. It would also save us the time and cost it would take to drill a small-capacity well in that vicinity.

We will need to weld a top plate on the conductor pipe to seal it from any contaminants getting into the conductor pipe. Then a 6" well casing will be welded into the center of it. This will turn the 12" well casing into a standard 6" well in which we will put a submersible pump. We have done this before, and it works well.

Thank you for the opportunity to present this to the board.

A handwritten signature in blue ink that reads "Jim Roberti". The signature is written in a cursive style with a large, looping initial "J".
