September 6, 2019

To the Board Members of the SVGMD,

In October of 2018 we filed for a well permit for the property located at 2528 Maddalena Drive, Beckworth California. At that time, a home would be put on the property and a potential small hemp garden would be present if the permits were approved for one. We applied for a domestic well considering it would be for minimal usage, not a high yield well. The well we will install will be 6" id and less than 50 gpm, it is my understanding this is well below the threshold for a high yield as outlined in the guidelines provided by the SVGMD.

In July of 2019, we reapplied for a permit, changing the use to Agricultural. At this time, there will be no home on the property due to a failed piezometer test. The need for a high yield well is still not needed for the use of the land.

August 2018, the new permit was denied by the SVGMD. I am requesting that we are put on the agenda for the September 16, 2019 board meeting. I am asking that the SVGWM approve the new permit application. Ben Grant (owner, driller) or myself will be present at the September 16, 2019 board meeting to answer any further questions.

Thank you for your assistance.

Lisa Grant
Corporate Secretary
